## Report on Workshop Design of Experiment Software - Training Programme

A one day workshop on the Design Expert software was organized by Dr. P. Lalitha (Coordinator), Dr. P. Arulpriya (Assistant Coordinator) and Ms. S. Suba Sree (Lab Technician) of Bharat Ratna Prof. CNR Rao Research Centre and Master of Ceremony was delivered by Ms. R. Harinivashini (Research Scholar, Chemistry). The workshop was held on 12<sup>th</sup> July 2023 from 10.00 am - 12.30 pm at Room No: 111 (Science Block) of our institution for Full time and Part time Research Scholars and Faculty members of School of Arts and Social Sciences.

The session began with a prayer song followed by introductory talk by **Dr. P. Lalitha**, Director, R&D i/c. The facilities available at Bharat Ratna Prof. CNR Rao Research Centre are briefly summarized with a short video glimpse for the audience. The advantages of the Design Expert software in big data analysis were also highlighted in the talk.

The theory and demonstration of the software were handled by **Ms.Pon Nivetha. A**, Research Scholar, Department of Chemistry. The theory session focused on the Introduction of Design Expert software, experimental design, data analysis, Response Surface Methodology (RSM), brief explanation of mixture designs, and examples of graphical visualization, and data optimization were provided. The theory part is followed by the software demonstration via a recorded video. The data used for the demonstration was mainly focused on Arts and Social Sciences (survey). Three examples were worked out by performing RSM analysis and optimization. The session included data importing, saving, analysis, exporting the result tables and charts and optimization.

The conclusion of the workshop was with the question and answer sessions. The minimum data set required and the possibilities of incorporating intervention factors for RSM analysis were enquired. Also the common queries such as the possibilities for consultancy, the tariff for the specific studies raised by the participants were addressed by the speaker Ms.Pon Nivetha in detail followed by participant feedback. Researchers and faculties belonging to English, Psychology, Economics, Education and Hindi of about **22 in numbers were the beneficiaries** of the workshop.

## About the Software Design Expert

Design-Expert is a **statistical software program** commonly used in the field of design of experiments (DOE). It is primarily **used to plan, analyze, and optimize experiments** in various industries such as pharmaceuticals, manufacturing, engineering, and research and development.

The **main purpose** of Design-Expert software is to help researchers and engineers design experiments that efficiently and effectively explore the **factors affecting a particular process or system**. It **provides tools and techniques for experimental design, data analysis, and visualization**.

**Some of the key uses and features of Design-Expert software:**

**Experimental Design:** Design-Expert allows users to design experiments by selecting the appropriate design type, such as factorial, response surface, mixture, or Taguchi designs. It helps in determining the optimal settings for the factors under investigation and ensures efficient use of resources.

**Data Analysis:** The software offers a wide range of statistical analyses for experimental data. It can perform analysis of variance (ANOVA), regression analysis, optimization, and graphical representation of data through various plots and charts.

**Response Surface Methodology (RSM):** Design-Expert supports response surface methodology, which involves creating mathematical models to understand the relationship between input variables (factors) and output responses. It helps in predicting the optimal combination of factors to achieve desired response levels.

**Mixture Designs:** Mixture experiments are used when a system or process involves multiple components. Design-Expert allows users to design and analyze experiments involving mixtures, helping to determine the optimal composition or proportions of the components.

**Graphical Visualization:** The software provides visual tools like contour plots, 3D surface plots, response trace plots, and interaction plots. These visualizations help users interpret and communicate the results of their experiments effectively.

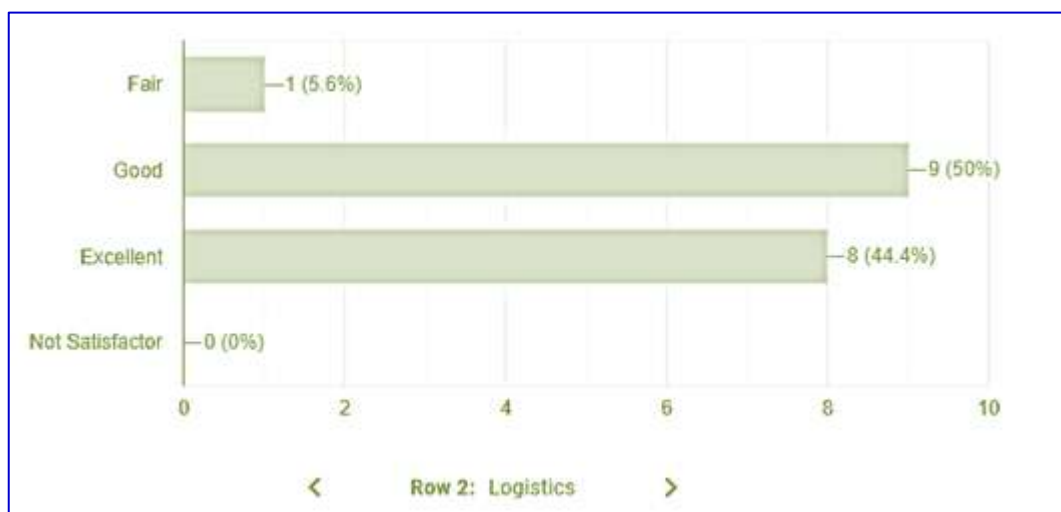

**Optimization:** Design-Expert facilitates optimization by allowing users to find the optimum factor settings that maximize or minimize a response. It can perform numerical optimization based on user-defined objectives and constraints.

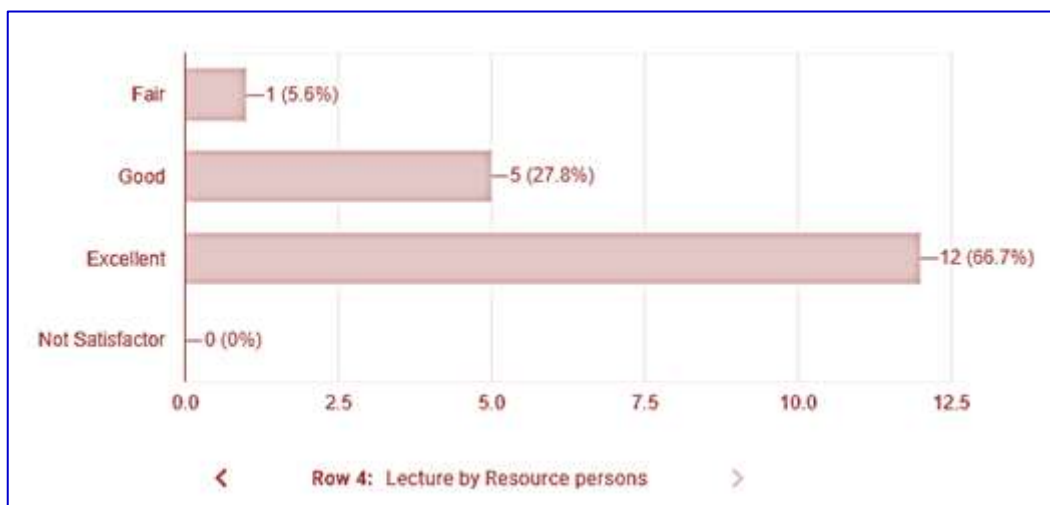

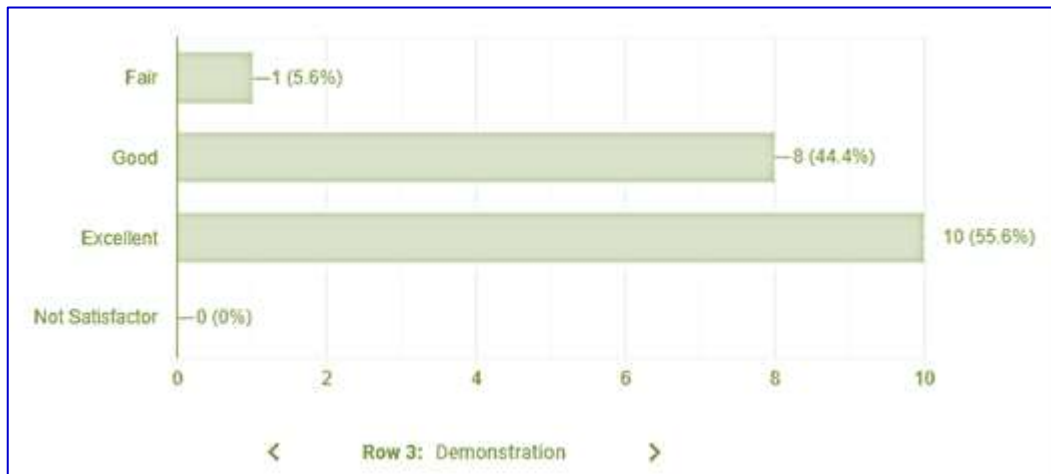

Overall, Design-Expert software is a powerful tool for experimental design and analysis, helping researchers and engineers make data-driven decisions, optimize processes, and improve product quality and performance.
